

Greetings from Consul General of Korea

April 24, 2010

First of all, as a Consul General of the Republic of Korea, I would like to express my heartfelt congratulations to the participants and their families of the Korean-American Scientists and Engineers Association's 9th Annual National Mathematics and Science Competition.

Until now, the KSEA National Mathematics and Science Competition has been a tremendous contributor in enhancing our young students' power in math, science and engineering. Moreover, it gives students the tools to become more developed and innovative in the fields of science and math. All of the participants here today are bright, show immense potential, and will contribute greatly to the development of engineering. Science and math are not only subjects in which our students can expand their intelligence; they are also basic fundamentals in every other field of study.

For the past thirty-nine years, the KSEA has devoted its time and expertise to enable young Koreans and Korean-Americans to have meaningful experiences that will inspire them to pursue careers in science and engineering. I would like to express my sincere thanks to KSEA for its organization of this event each year and hope for the continual commitment from its members to support the aspirations of the young students in their communities.

I hope every one of the participants will have a wonderful chance to advance their power of math and science. Good luck to every one of you!

Thank you very much!

Sincerely,
